

Sunbaba used over 200 square metres of its air permeable Austronet 204FR to produce a series of specially profiled sails for the T200 celebrations in Trafalgar Square. They created 7 Austronet sails, the largest of the sails at over 140m² stood alone in the centre, while six smaller pieces were attached to the PA towers flanking the main sail, covering the PA system. They were used as a backdrop to project imagery of 200 years of the Royal Naval history. Innovision's Technical Director Geoff Somerton explained; "When the fabric arrived it was tested for frequency and sound degradation by Delta Sound and we found it all worked very nicely, with no effect on the sound but still being able to project the images clearly for a striking effect."

Sunbaba Environmental Statement

As a company, we are working closely with both our clients and suppliers to reduce environmental, economic and social impact of our products and have a number of recycling options available. Sunbaba is currently in the process of working towards BS9801 compliance.

Sunbaba was approached by Compton Skyline Project in Brighton to produce six large projection screens for a unique, temporary artwork mounted on roofs of a row of Victorian terraced houses. Sunbaba produced the screens, which provided a total projection area of just under 300m² from their white, air permeable Austronet 204FR. Steve Gelliot, Project Director explained; "We tested several screen materials and as wind was a big factor we chose Sunbaba's Austronet material, it is inherently much stronger, and more suited to outdoor use than other materials." From a distance the screens and the scaffolding were invisible and you were left with haunting wafting images hanging in the sky like huge ghosts above the houses."
