

Air Permeable Austronet

Austronet is a versatile range of air permeable fabrics unique to Sunbaba. They are used extensively by the events, exhibition, sports and construction industries worldwide. Knitted from a special, high strength tape they are lightweight, eco-friendly, water / tear resistant and offer significant advantages over other materials. They are available in a wide range of colours and can be supplied as plain rolls, overprinted or customised to meet a client's specific needs. Austronet is an ideal medium for covering heras fencing, scaffolding and temporary structures. It has been widely used to create giant front projection screens, for ground protection, tennis windbreaks and PA scrims etc.

Sunbaba Environmental Statement

As a company, we work closely with both our clients and suppliers to reduce environmental , economic and social impact of our products and have a number of recycling options available.

* Not all colours are available in all widths - please call
FR Certification - Flame retardant - DIN 4102 B1, BS5867 : Part 2 1980

Sunbaba has three distinctive products within its Austronet range 202, 203 and 204. Each of these has a different density and air permeability. The highly permeable Austronet 202 is used extensively plain or overprinted for PA Scrims and also for covering exhibition stands as it is "Sprinkler Approved". The Austronet 203FR is used for a wide range of applications as a ground protection netting in stadiums, because it allows the grass to breathe and the easy collection of rubbish. Many of our clients use a combination of our plain and overprinted Austronet 204 for covering heras fencing, cladding scaffolding or covering temporary structures and grandstands.
